# 2019 CARDIAC ARREST DATA NEW CA DOCUMENTATION PRIORITIES IN 2020

MATTHEW JORDAN, MD CONNIE MATTERA, MS, RN, PM MARCH 10, 2020

Image Trend

ST 1977

Reviewed all cardiac arrests for 2019
Query included data fields that demonstrated:
Cardiac arrest listed as primary impression
CPR documented as a Procedure
ROSC mentioned in the disposition
Any use of the Cardiac Arrest Situation Tool in

References Ref 1972 Ref

NORTHWEST

## DEFINITIONS

- Queried for documentation of return of spontaneous circulation (ROSC)
- Sustained ROSC: Surviving to an inpatient bed (different than the commonly used >20 minutes)
- Cerebral Performance Category (CPC) Scores obtained from Cares Registry

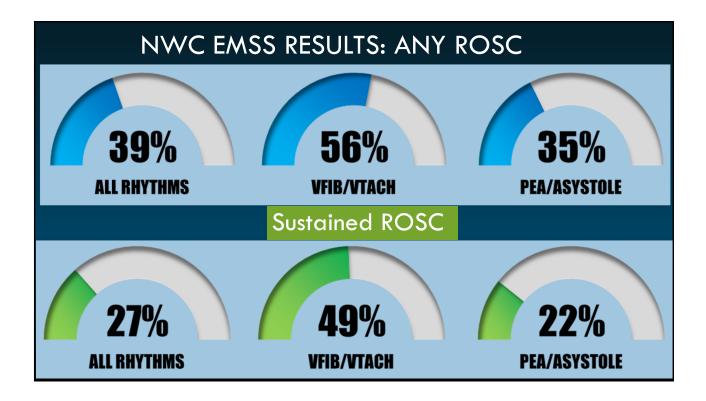

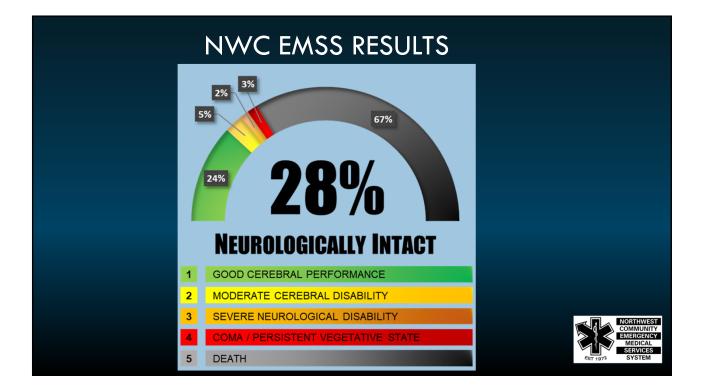

### NWC EMSS DATA

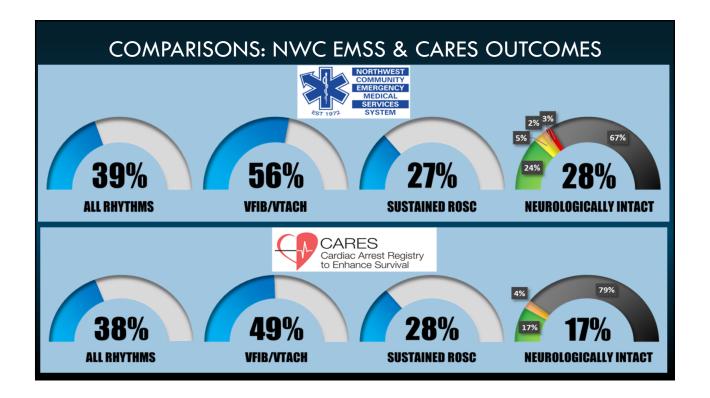

624 total OHCA identified (2019)

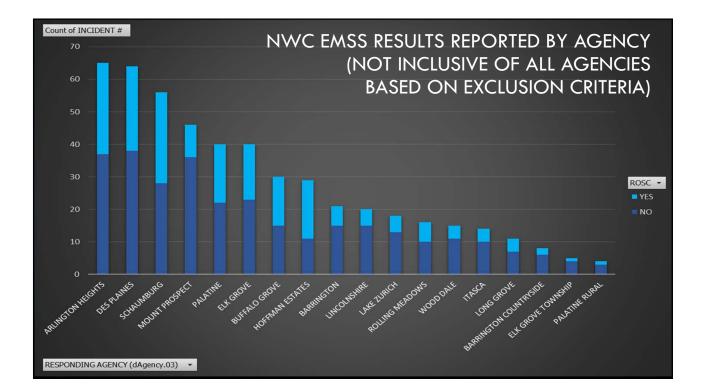

- •23 excluded for being a DNR (do not resuscitate)
- 20 excluded for being a traumatic cause
- 4 excluded for duplicate reports or Mutual Aid
- 5 excluded for being Obvious Death (triple 0)
- •70 excluded due to lack of final hospital outcomes
- N = 502 cases included and reviewed

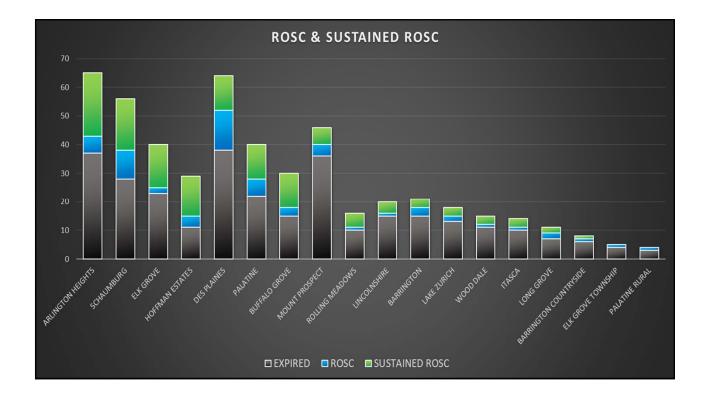

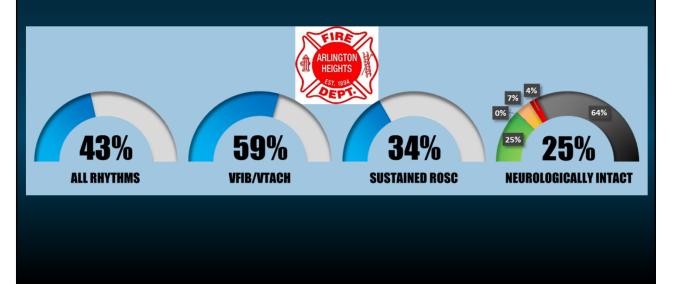

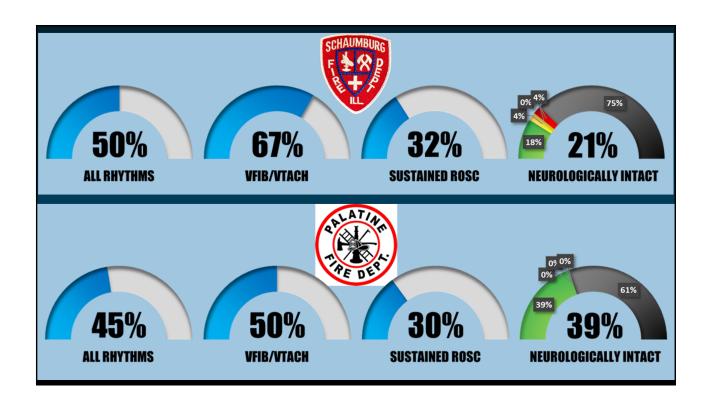

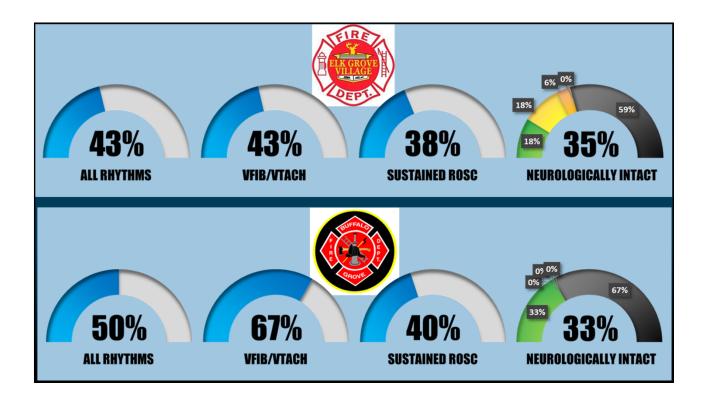

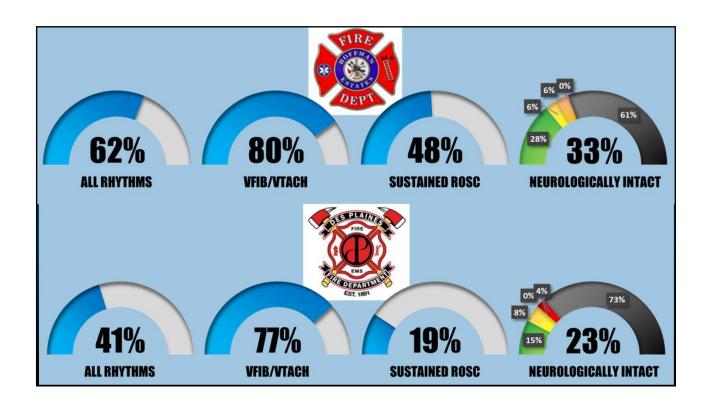

## RESULTS BY AGENCY W/ HIGHEST N#

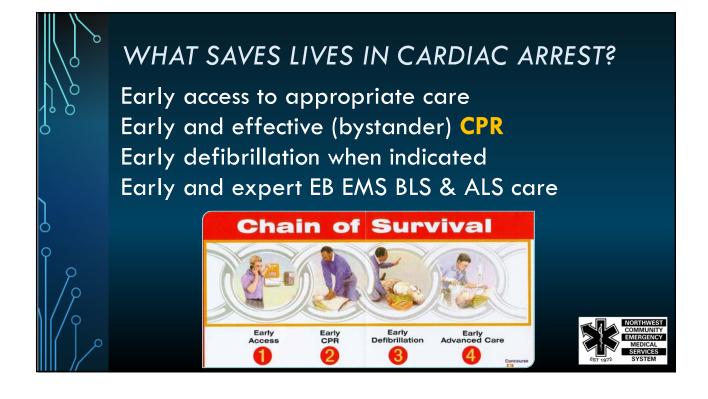

- •Maximize dispatch (EMD) involvement
- Use interventions that improve survivability
- Endorse meaningful technology
- •Encourage 100% post-arrest QI review

Endorse the MPDS NO, NO, GO approach

- -ls the person awake?
- -Is the person breathing?
- -If no, CPR is started

#### All of NWC EMSS dispatch centers use MPDS

### NWC EMSS DISPATCH CENTERS

- Northwest Central Dispatch (NWC)
- Addison
- •Red Center
- Lake Zurich
- Cen-Comm
- Du-Comm
- Nor-Comm
- •All privates have their own

### DATA FROM NWC DISPATCH

325/502 calls dispatched by NWC For this report, all dispatch data came from NWC 97% of CA were identified by dispatch
226/325 provided w/ pre-arrival CPR instructions NWC EMSS: 70.1% got pre-arrival CPR National average: 49%

### NEED FOR BYSTANDER CPR

Large numbers of trained CPR providers critical Key difference if CPR occurs in a public location This is where phone apps like "Pulse Point" advertise their application Only 10% of CA occurred in a public location Utility of phone app limited here with dispatch % and few public CA

### CA STANDING COMMITTEE

- •Committee created separate from PBPI
- •Like all committees, shared Governance Model used
- •Fractal Response Times are important markers
- However, CA process and outcome data are better reflections of EMS performance
- Meaningful (accurate) data and 100% QI review important to achieve outcomes that meet and exceed national benchmarks

Over past year, data queries found to be arduous Documentation varies between agencies and medics To query, PCRs must have defined values and be completed consistently across all agencies

Ex: Should procedure of manual CPR be documented ?
Found only 34% had procedure documented properly

#### COMPLETION OF DATA GATHERING

Hospital outcomes essential for closing the loop Best process to obtain this data?

- CARES Registry is one solution (and IMHO the best)
  Entry into Cares by EMS providers is essential to start the process
- •We were only 50% compliant a year ago CARES and Teri Campbell are excellent resources

#### COMPLETION OF DATA ENTRY - 2020

 For 2020, all will enter CA data into CARES Busiest FD agencies average 5 CA/month ImageTrend fields now mirror CARES questions Data entry should take <15 minutes/call</li>

• This process will eliminate missing records and allow for accurate rolling (real time) data collection

#### **OBTAINING PERFORMANCE MEASURES**

- Physio & Zoll have cardiac arrest review programs
- Programs similar but offer different flavors
- In past 6 mos, we pushed for 100% CA review looking at multiple measures
- Data is not punitive, but informative
- EMS MDs must be aware of these programs, their functionality and their System's data

#### PERFORMANCE MEASURES

This year, Stryker and Zoll will sponsor classes that discuss CA review

Software is robust and allows "scrubbing" of data Example, when ROSC is obtained CPR stops However, software doesn't recognize ROSC so counts as a significant CPR pause in calculating data

Learning program basics is essential

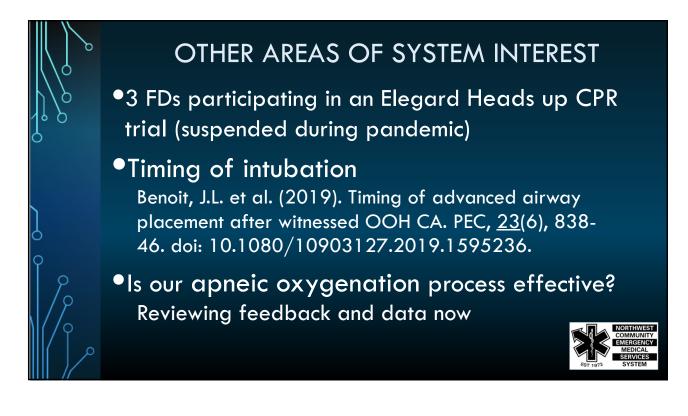

### 2020 PERFORMANCE MEASURES

With >500 CA/yr, EMS MD can't review all reports Agencies must review their own, but provide feedback

- Again, busiest FDs have average of 5 CA/month
- Comparison: all Fire suppression calls reviewed monthly
- True human saves from fire suppression pale in comparison to CA saves

2020: All CA measures included in 100% QI review Goal 2020: Develop a Post-Arrest Score
